Find a partner abroad for your business

The Network manages Europe's largest online database of business opportunities.

Search for business or academic partners to manufacture, distribute, co-develop and supply your products, ideas and services.

Find a partner in three steps:

1. Search our global partnership database based on your criteria
2. Express your interest by telling us about your company
3. We put interested partners in touch

Summary

A German research laboratory looks for industrial and research partners experienced in intravascular catheter-based application, toxicology, vascular wall immunology and pathology for a project under the H2020 call Regenerative medicine: from new insights to new applications. Aim of the project is to develop a method for preventing the pathologic dilatation of the aorta in case of aneurysms. The laboratory will induce the regeneration of elastin to finally stabilize the affected vessel sections.

Description

Due to demographic change and the associated increase of elderly and multimorbid patients, an increase in thoracic and abdominal aortic aneurysm cases is to be expected. The current therapy is a continuous monitoring of progression. The inevitable progression of the disease increases the risk of rupture of the affected vessel over time. The rupture of the aorta often leads to strong and usually insatiable bleeding and can be fatal. Therefore, after reaching a diameter of > 5 cm, a preventive surgical procedure is required.

In order to tackle this problem a research laboratory of German university hospital is going to submit a proposal under the H2020 call SC1-BHC-07-2019 - Regenerative medicine: from new insights to new applications.

In this project, the research laboratory aims to induce the regeneration of elastin to stabilize the affected vessel wall. For this purpose, using the elastase-induced aneurysm model in rabbits, the

Summary

A not for profit company is an incubator for a Dutch medical university and other universities worldwide. It builds the next generation learning platform for new ways of surgical training & teaching. They aim to build a simpler and cheaper surgical instrument set for caesarean delivery, laparotomy and open fracture treatment with partners within the frame of a technical cooperation agreement. This request is part of an open innovation challenge.

Description

The Dutch SME is a not for profit company which is fully owned by a medical university in The Netherlands and is an incubator for this university, other universities in the Netherlands, in Europe and far beyond.

The SME is building the next generation learning platform to generate, apply and spread the knowledge about new ways of surgical learning, training & teaching - making a difference for all people, near and far, across all borders.

One of their goals is to save lives by joining forces with partners to build the ultimate surgical instrument set for caesarean delivery, laparotomy and open fracture treatment.
