## Topic Description

### Specific Challenge:

The clean-energy transition doesn't just pose technological and scientific challenges; it also requires a better understanding of cross-cutting issues related to socioeconomic, gender, sociocultural, and socio-political issues. Addressing these issues will help to devise more effective ways of involving citizens and to better understand energy-related views and attitudes, ultimately leading to greater social acceptability as well as more durable governance arrangements and socioeconomic benefits.

### Scope:

In 2018, proposals should be submitted under the theme "Social innovation in the energy sector" and in 2019 under the theme "Challenges facing carbon-intensive regions". They should address one or several of the questions listed under the respective sub-topics below. All proposals should adopt a comparative perspective, with case studies or data from at least three European Union Member States or Associated Countries.
